

TESTED AND TRUE

Enhanced Silicone Liner

Air-blown installations use an air-blowing technique that minimizes the risk of fiber cable damage, speeds up installation, and extends installation distances.

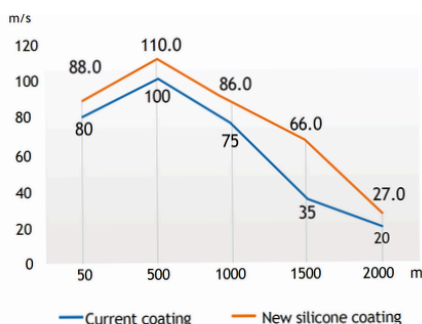

A permanent solid lubricant is applied inside the microduct tube.

Knet's upgraded **silicone liner** to increase installation speed and reduce installation time for fiber cables.

Faster than Ever!

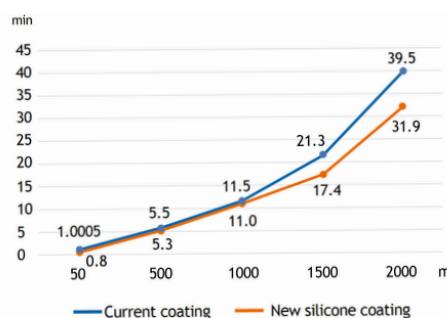

Enhanced Silicone liner helps to speed up the blowing performance by reducing friction.

Blowing Speed

24% Faster

Blowing Time

19% Reduced

Friction has been decreased by Avg. 20%
